

# IDcentre

EDUCATION • EXPERTISE

## BE PART OF THE SHARING COMMUNITY AND DEVELOP YOUR COMPETENCES

Since 1990 IDcentre is specialised in creating competence development profiles in relation to the recognition, authentication and verification of processes related to identity and documents. The scope is wide, yet focused on translating the constantly changing concepts and techniques into hands-on, comprehensive training programs and courses.

To guarantee integrity and reliability, IDcentre is working close together with governmental organisations and law enforcement. Our teaching staff is a blend of excellent technicians working in the area of verification and authentication and didactical experts, focusing on tailor made concepts for individuals and specialised organisations.

Our clientele is found all over the globe and we are proud of our good reputation in the field of competence development for people working with authentication processes.

No organisation is the same. Therefore we developed wide array of modules to meet with specific training needs. All processes vulnerable to fraud are covered in our approach.

In the specific area of financial transactions, banknotes and possible related threats, IDcentre has developed special training programs for OLAF, ECB and Europol to combat fraud.

Together with the major credit card companies, IDcentre has developed and executed training for several banks, ministries and financial institutes. Delivering training is not just about knowledge. Our training goals and learning outcomes are simultaneously focused on awareness and mind setting. This focus ensures intrinsic competence development and is added value on top of disclosing information.

In the context of competence development, the University of Dubai and IDcentre have created a brand new initiative. The joint effort and expertise of both organisations have lead to a comprehensive training program for the financial branch.

We believe in cooperation, the exchange of information and personal competence development of individuals. The new formula for multiplying knowledge is sharing.
