EDUCATION AND EXPERTISE

IDcentre is a training institute in The Netherlands. One of our major objectives is to provide training for organisations and groups dealing with issues on identity, security printing and counterfeiting. IDcentre is operating in close relation(ship) with (inter)national authorities in order to obtain the most update information and to guarantee objectivity and integrity. IDcentre provides training courses to The Dutch custom organisation, the Dutch police academy, the Royal Marechaussee and the National Forensic Institute. In the European training programs, the European Commission and Frontex are using the facilities in Eindhoven to make sure the participants from all over Europe and beyond will have the best training base.

Hands on in Eindhoven

In order to guarantee the best results we often work within the “hands-on” model. This didactical method focuses on a combination of practical and theoretical information. Learning by doing assures the anchoring of knowledge in technology and processes. In Eindhoven we give insight in complex processes by using special “open” equipment. Added value in coming to Eindhoven also is the fact that participants will not be interfered by their organisation. Unlike the working environment, a study environment is quite different. Our facility offers a fine study environment to ensure the

best results. Our staff is well trained, experienced, up to date and, moreover, used to work with participants working in law enforcement and related branches.

Tailor made solutions

In order to meet with your requirements and expectations we can also provide tailor made solutions. We can make an inventory of required qualifications and develop a training program that fits into your corporate profile. We combine theoretical knowledge with practical sessions. This to enhance the insights of identity related Technologies. Due to the content of the training, our institute and teaching staff meets with the regulations concerning trustworthiness and integrity.

Some examples of training modules are:

Printing techniques | Digital printing | OVD-Cards | Profiling | Substrates
Biometrics | Security mix | Personalisation | Colormetrics and photospectral analyses.

Information

If you feel we can be of any assistance, or if you want more detailed information please contact us for a free consult.
